Product information

9. Product description

This document refers to perforated and whole bricks produced in Koria at Wienerberger Oy Ab from red clay.

10. Technical specifications

Burnt bricks can be used for façade and frame construction, chimney masonry as well as interior and exterior structures.

11. Product standards

Wienerberger bricks are CE marked and their properties can be found on the product packaging and on the website: www.wienerberger. The products comply with the standard SFS-EN 771-1 + A1 for burnt bricks.

12. Physical properties

The size of the brick may vary depending on the application. The amount of brick used per square meter of wall depends on the size of the brick. The most common brick sizes and brick consumption in façade construction and chimney masonry are shown in the table below. Consumption calculated with 15 mm mortar joints and losses about 4-5%. More information can be found on the manufacturer's website.

16. System boundary

This EPD covers the following modules; A1 (Raw material supply), A2 (Transport), A3 (Manufacturing) and A4 (Transportation of the product to the building site) as well as C1 (Deconstruction), C2 (Transport at end-of-life), C3 (Waste processing) and C4 (Disposal). In addition, module D - benefits and loads beyond the system boundary - have been included. Only primary materials were taken into account in benefits calculations.

17. Cut-off criteria

All used materials, energy, packaging, transportation fuel and waste treatment until the end-of waste state have been included in the product stage (A1-A3). Results for the product stage have been provided as an aggregate. A4 transportation has been estimated to be 130 km, the return trip has not been considered. Module B information has not been presented or included in the LCA calculation. Of module C all impacts have been calculated (C1-C4). C1 includes the deconstruction using energy 0,011 kWh/kg. The distance for C2 has been estimated to be 50 km. C3 includes bricks crushing. C4 includes the landfilling of the product which cannot be separated. Module D considers the benefits of brick recycling.

18. Production process

The product manufacturing includes following stages: clay homogenizing, mixing the recipe components, pressing and cutting the brick mass to the required size and shape, drying, burning and cooling the bricks, and finally, packaging.

Environmental impacts and raw-material use (7.2.3-7.2.4)

19. Environmental impacts

The results of a life cycle assessment are relative. They do not predict impact on category endpoints, exceeding of limit values, safety margins, or risks. The impacts are presented per declared unit, 1 ton of product. The impacts are mainly caused by the manufacturing process (A3) energy consumption.
